

AUTO-DRAIN 24130-3" & 24140-1.5" INSTRUCTIONS

IMPORTANT: It is RECOMMENDED that the holding tank be empty before installation and initial operation of Auto-Drain. It is NOT necessary to remove valves to install Auto-Drain.

TOOLS REQUIRED: 5/32 allen wrench, phillips screw driver, adjustable wrench, wire cutters, and crimp tool.

INSTALLATION:

NOTE: It is not necessary to remove valves to install Auto-Drain

3" AUTO-DRAIN SHOWN

figure 1

Universal bracket

figure 2

- Using two existing flange bolts on the Drain valve, remove nuts, align holes in Universal Bracket (10). See figure 1 for placement, replace nuts.
- Remove valve handle (not shown).
- Thread nut (9) and spacer (8) onto shaft, press down on spacer to make sure shaft is all the way in and valve is fully closed.
- IMPORTANT:** Before you install the Auto-Drain to the valve ensure that the safety space is provided (see figure 2). This space is needed so that the valve will fully close without jamming the electrical mechanism and damaging the Auto-Drain. To set this ensure valve and Auto-Drain are in the fully closed position. Place the mounting rib on the back of the Auto-Drain to the top of the universal mounting bracket (10), thread spacer (8) up or down on the valve shaft as needed to achieve the space as in figure 2. Once space is set, lock nut (9) to spacer (8) then attach Auto-Drain to bracket by installing screws (12), washers (20) and lock nuts (14). Install bolt (27) and tighten pulling spacer up to the rack gear, ensure spacer and shaft DO NOT turn freely.
- Mechanical installation is now complete.

ELECTRICAL INSTALLATION:

Mount switch in a compartment close to Auto-Drain. Insure switch cannot be pushed accidentally by articles stored in the compartment.

Connect rocker switch box black wire to a constant positive 12 volts OR if using optional Power Disconnect Key Switch see below.

Connect rocker switch box white wire to ground (-12VDC).

Connect connector assembly of switch box to connector assembly of Auto-Drain.

OPTIONAL POWER DISCONNECT KEY SWITCH

- Connect terminal #1 of key switch to (+) positive battery wire.
- Connect terminal #3 of key switch to white wire of switch box.
- Terminal #8 will not be used, it may be cover with heat-shrink or clipped off.
- To prevent electrical problems terminals should be protected by insulated connectors or heat-shrink.

AUTO-DRAIN 24130-3" & 24140-1.5" INSTRUCTIONS

OPERATION:

Insure drain valve is properly connected to drain hose. Push and hold rocker switch for 3-4 seconds to fully open or close valve. The indicator light on the switch box will be on at any time the valve is not fully closed. Hold the switch in the closed position until the light goes out.

Be careful when cleaning drain valve, Auto-Drain applies enough force to cause injury.

To manually open valve, remove the 2 (12) screws. This will free the Auto-Drain from the valve housing and allow you to pull/push on the Auto-Drain to open or close the valve.

Reminder!! Leave proper spacing between spacer and rack gear (1/8"-3/16") when assembling. **Prior to tightening bolt (10) see installation notes under IMPORTANT on page 1.**
