

INSTRUCTIONS

Tools Required: Screwdriver

1. Turn off water supply to faucet.
2. Pry off handle cap (A) with a screwdriver.
3. Remove handle screw (B) at top of handle. Remove handle (C) by pulling straight out.
4. Remove old flange (E) by un-threading nut (D).
5. Install new flange by threading onto nipple (F) and replacing nut (D).
6. Replace handle (C) and tighten with handle screw (B).
7. Replace handle cap (A) and turn on water supply to faucet.
