

To Install (for hinged doors):

1. Adjust the bar length so the padded base is 15-18 inches from the bottom of the door when the yoke end is placed tightly against the underside of the door knob.
2. To adjust, press in the silver button and rotate the larger tube slightly, then slide the smaller tube in or out to the correct length. At the desired length, rotate the larger tube until the silver button pops up in the correct adjustment hole.

3. Place the yoke end of the Master Lock Door Security Bar tightly against the underside of the door knob.
4. Slide the padded base of the security bar toward the door until snug.

Do not place on loose rugs or floor mats.
