

Precautions

1. Clean exposed parts with a soft, slightly damp cloth. To remove stains, use a mild soap. Never use detergents, excess water, treated cloths, harsh cleaning agents, or sprays. Do not attempt to lubricate or open scale casing as this will void your warranty.
2. Although your scale is designed to be maintenance-free, it contains sensitive electronic parts. Avoid rough treatment. Do not drop, kick, or jump on it. Treat it with care to ensure the best performance.
3. This scale is designed to read weights between 11 and 550 lbs / 5 and 250 kgs / 11lbs and 39 st 4 lbs. To prevent damage, do not place more than 550 lbs / 250 kgs / 39 st 4 lbs on it.
4. Do not store scale where you store cleaning chemicals. The vapors from some household products may affect the electronic components of your scale. Do not store scale on its side.
5. This scale is an extremely sensitive weighing device. In order to prevent run down of the batteries, do not store anything on the scale.
6. Do not dispose of batteries in fire. Batteries may explode or leak. Remove the batteries if the scale will not be used for a long period of time.

General Operation

1. This scale operates on 3 "AAA" batteries, which are included. Please see "Battery Installation" section of this manual for installation instructions. Also, some models have a static cling label on the lens to prevent scratching. Please remove before use.
2. Your scale has been set at the factory to read weight in pounds (lb). You may select kilograms (kg) or stone (st lb) (1 stone = 14 pounds) units of measurement by pressing the button on the bottom of the scale while the scale is on. (Press firmly on the platform to turn the scale on.)
3. Place scale on flat, hard surface. Carpeted or uneven floors may affect accuracy.
4. Step on the scale (disregarding the reading) and step off. This process insures the scale is set and is now ready for use. At all other times step straight onto the scale.

6. The scale will turn off automatically.

Battery Installation

1. Use 3 AAA batteries (included. Remove any plastic wrap from the batteries before proceeding). Always replace both batteries at the same time; do not combine old and new batteries. Do not mix Alkaline, carbon-zinc (standard) or Nickel-Cadmium (rechargeable) batteries.
2. Open the battery compartment on the bottom of the scale.
3. Place the new batteries into the battery compartment according to the "+" and "-" polarity symbols at the bottom of the compartment.

NOTE: Please recycle or dispose of batteries per local regulations.

WARNING: Batteries may pose a choking hazard. As with all small items, do not let children handle batteries. If swallowed, seek medical attention immediately.

PRECAUTION: Do not dispose of batteries in fire. Batteries may explode or leak. Remove the batteries if the scale will not be used for a long period of time.

Low Battery

Your Taylor® scale is equipped with a low battery indicator. It will display "LO" or readings will grow dim or become irregular if the batteries needs replacement.

Trouble Shooting

In Case of Difficulty...

1. Place your feet in the same position every time you weigh yourself. Stand still during measurement.
2. Weigh yourself without clothing whenever possible. Clothes can vary in weight.
3. Move the scale to a location where it won't be bumped. If your scale is bumped while being activated or while in use, an inaccurate reading may occur.
4. For the most consistent readings, weigh yourself at the same time of day. Allow for weight fluctuations due to food or drink in your system.
5. The maximum capacity of this scale is 550 lbs / 250 kgs /39 stone 4 lbs. Should "Err" appear on the display during a weighing, this indicates that the maximum weighing capacity of the scale has been exceeded. Remove the weight immediately; otherwise, permanent damage may occur.

Reaching Target Weight

Maintaining proper weight is essential to healthy living. Obesity has been linked to a higher risk of heart disease, diabetes and some forms of cancer. The Body Mass Index (BMI) is the most widely accepted measurement of weight according to health professionals. Use the chart below to determine your own BMI by matching your height in the left hand column with your weight in the center. Anyone, male or female, with a BMI of 25 to 29 is considered over weight and a body mass index of 30 is considered obese. Remember to eat right and exercise.
