Intuitive system overview - all you need to know

As soon as you 'log on' Octo GX provides an instant overview of your system: Battery state of charge; present power consumption; power harvest from PV; power provision from mains/generator.
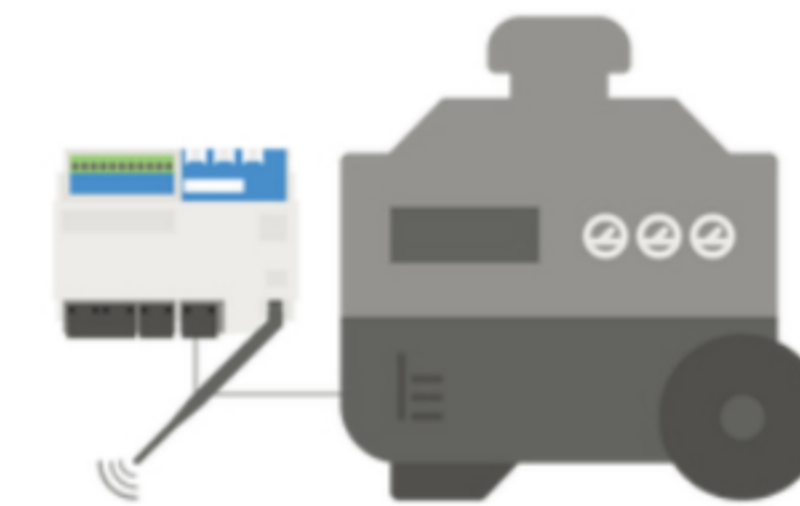

The full power of Victron Remote Management

Victron Remote Management (VRM) provides you with full access to the very extensive controls and settings of all system-components which are connected to either your CCGX, Venus GX or Octo GX. It allows remote user and installer login - from anywhere, at anytime. This powerful application also provides for hassle-free diagnostic checks and analysis of archived information.

Automatic Generator start/stop

The Octo GX can be programmed to auto-start your generator - triggered by low-voltage; high-demand; or battery state of charge. It can be further tailored to delay ignition until the end of 'quiet' periods - avoiding accidental nuisance at dead of night.

Remote Console - control everything from anywhere...

Remote Console provides visual access to the live data and settings of your Octo GX ...and because it's remote - you can do that from anywhere in the world.

ESS: Energy Storage Systems - 24 hour Monitoring

The Octo GX manages Energy Storage Systems. It keeps back-up batteries at 100%; kicks-in during power-cuts; and diverts excess (solar) power to self-consumption - saving you money. For examples and more detailed information see the ESS (Energy Storage System) manual.

Looking for dependable RV batteries? Rely on Victron Energy for quality and long-lasting products.
