

# Solar Controller / Battery Charger

Input: DC12V Solar panel (Max. 25V)
Output: DC12V 10A / DC12V 15A

Model Number: ZS-10A / ZS-15A (Non-waterproof)

ZS-10AW / ZS-15AW (Waterproof)

**User's Manual** 

#### **FEATURE**

- Advanced MCU control pulse width modulated (PWM) technology, high efficiency operation.
- Target for LiFePO4, LTO (Lithium Titanium Oxide), Gel, AGM, Conventional lead-acid (WET) and Calcium Batteries.
- Built in regulator to prevent your battery from being overcharged. Overcharging occurs when the charge voltage is unregulated. This can result in premature battery failure.
- Come with a regulator to prevent your battery from being under charged, in the solar energy field, battery undercharge always occurs, especially on some Conventional lead –acid or Calcium batteries; The unit provides an automatic Equalization feature for deeply drained Conventional lead acid battery or Calcium battery, as well as provides a cycling automatic Equalizing feature every 28 days.
- Can be connected to the battery permanently to keep the battery fully charged by using a process called "floating". This means the controller will stop charging when the battery is full and will automatically start charging the battery as required. This process will also reduce water loss and help prevent the battery from 'drying out'.
- Protects your battery from discharge at night. Under low light or no light conditions the solar panel voltage could be less than the battery voltage. The unit contains a special circuit which prevents current flowing back from the battery and into the solar panel.
- Colored LED's to easily indicate the operational status and battery conditions.
- Digital LCD to directly display battery voltage, charging current, charge percentage, charging capacity (Amp hour), battery types, full charge and faulty codes.
- Includes a port for external battery temperature sensor. (Temperature sensor optional)
- Multi charging protections against reverse polarity, short circuit, over temperature, over voltage, etc.
- Surface Mount or Flush Panel Mount options.
- Conformal-coating circuit boards and plated terminals will withstand hostile environments
- •Waterproof and non-waterproof selectable.

For use with 12Volt Solar Panel Only Suitable for Solar panels up to 170 Watts for ZS-10A / ZS-10AW 255 Watts for ZS-15A / ZS-15AW

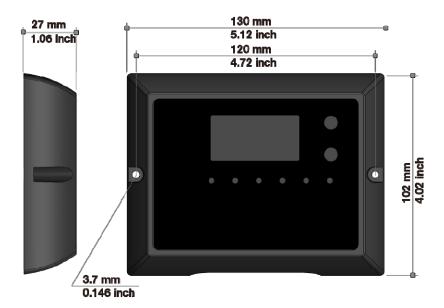

#### WARNING - IMPORTANT PLEASE READ

- This charger is designed for indoor use (non-waterproof type ) or outdoor Use (waterproof type).
- Do not disassemble the controller. Talk to a qualified person if the unit requires repairing.
- Lead acid, LiFePO4, LTO batteries can be dangerous. Ensure no sparks or flames are present when working near batteries.
- Eye protection should always be used. Never short circuit the battery
- Given sufficient light solar panels always generate energy even when they are disconnected.
- Accidental 'shorting' of the terminals or wiring can result in sparks causing personal injury or a fire hazard. We recommend that you cover up the panel(s) with some sort of soft cloth so you can block all incoming light during the installation. This will ensure that no damage is caused to the Solar Panel or Battery if the wires are accidentally short circuited.
- Always install a battery fuse on each circuit including the solar controller
- Do not reverse connect the wires to the solar panel or battery

# MOUNTING THE DEVICE

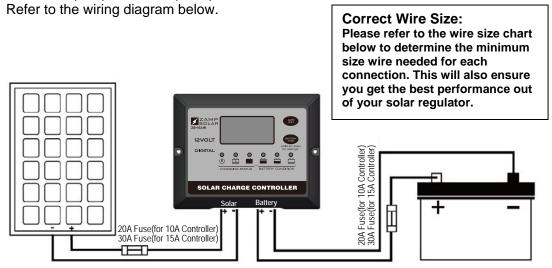

#### The Solar Controller is mounted as shown below

The quickest and easiest way to mount the unit is to use the two plastic spacers and self tapping screws supplied and mount the unit to a flat surface,

# WIRING CONNECTIONS

To protect the Battery and the Solar Panel, we strongly recommend that you place a inline fuse on the positive wire on both the "Solar" and "Battery" Circuits. 20A fuse for 10A controller; 30A fuse for 15A controller (As close to the Battery /Panel as possible) The Solar Controller has 4 terminals which are clearly marked 'Solar' and 'Battery'. There is a (12V) and earth (GND) terminal for each circuit.

	Battery C	onnection	<b>Solar Array Connection</b>		
Length of Wire	5ft	10ft	10ft	15ft	20ft
Size (AWG)	12	10	12	10	10

- 1. Using the stranded wires, screw tightly the wires to the "Solar" terminal on the back of controller and connect to the Solar Panel like shown.
- 2. Using the stranded wires, screw tightly the wires to the "Battery" terminal on the back of controller and connect to the Battery like shown.

When the connections are completed, the Solar Controller will start working automatically.

#### **OPERATION - LCD DISPLAY**

Please check your battery manufacturer's specifications to select correct battery type. The unit provides 6 battery types for selections: LiFePO4, LTO, Gel, AGM, WET (conventional lead acid), and Calcium.

Press **BATTERY TYPE button** and hold for 3 seconds to go into your battery type selection mode, the battery type you select will be shown on the LCD meter, the default setting is AGM Battery; the controller will automatically memorize your battery type setting.

#### Caution: Incorrect battery type setting may damage your battery.

When the controller powers on, the unit will run self-qualify mode and automatically show below items on LCD before going into charging process

Self-test starts, digital meter segments test

Software version test

Rated voltage and current test

External battery temperature sensor test (if connected)

Indicates the solar panel connected.

After going into charging process, the LCD displays the charging statues as below: Press **VOLT / AMP button** in sequence, the LCD will display in turn with Battery Voltage, Charging Current, Charged capacity (Amp-hour) and Battery Temperature (if external temperature sensor connected)

# Display in sequence-

## Display when battery fully charged

Press **VOLT / AMP button** in sequence, the LCD will display in turn with Battery Voltage, Charging Current, if you do not press the button, the LCD will alternatively display the FUL and VOLT or FUL and AMP every 2 seconds

$$^{\circ}$$
 988  $^{\circ}$   $\Rightarrow$  888  $^{\circ}$   $^{\circ}$   $^{\circ}$   $^{\circ}$   $^{\circ}$  98.8  $^{\circ}$   $^{\circ}$   $^{\circ}$ 

The VOLT / AMP button can be changed at any time during charging process.

You also can visually monitor your battery charging condition for each battery; there is a LCD bar to show the percentage of charge, you can easily see if the battery is charged to 25%, 50%, 75% or 100%.

The LCD also can be treated as an independent voltage meter or thermometer. A voltage less than 11.5V Volts indicates that the battery is discharged and needs re-charging.

#### CHARGING STAGES

# The unit has a 5-stage charging algorithm.

Soft Charge (Level 1) –Bulk Charge (Level 2)-Absorption charge (Level 3) – Equalizing Charge\* (Level 4) - Float Mode (Level 5)

**Soft Charge-** When batteries suffer an over-discharge, the controller will softly ramp the battery voltage up to 10V.

Bulk Charge-Maximum current charging until batteries rise to Absorption level

Absorption Charge-Constant voltage charging and battery is over 85%.

**Equalization Charge\***-Only for WET battery or Calcium battery type, when the battery is deeply drained below 10V, it will automatically run this stage to bring the internal cells as an equal state and fully complement the loss of capacity. (LiFePO4, LTO, Gel and AGM battery do not run Equalization charge)

Float Charge--Battery is fully charged and maintained at a safe level.

A fully charged Lead acid battery (GEL, AGM, WET battery) has a voltage of more than 13.6 Volts; A fully charged LiFePO4 or LTO battery has a voltage level of 13.4V.

#### **OPERATION - L.E.D. INDICATION**

The 6 LED's indicate the	υ	4				
charging status and the battery condition	Red	Blue	Green	Green	Yellow	Red
Solar Power Present-No battery connected	ON	OFF	OFF	OFF	OFF	Flash
Soft charging	ON	Flash	OFF	OFF	OFF	ON
Bulk charging	ON	ON	OFF	Subject to battery voltage		
Absorption charging	ON	ON	OFF	ON OFF OFF

Float charging	ON	OFF	ON	ON	OFF	OFF
Solar panel weak	Flash	OFF	OFF	Subject to battery voltage		
At night, no charge	OFF	OFF	OFF	Subject to battery voltage		
Battery Voltage below 11.5V (+/-0.2V)	ON	ON	OFF	OFF OFF ON		
Battery Voltage between 11.5V - 12.5V(+/-0.2V)	ON	ON	OFF	OFF	ON	OFF
Battery Voltage above 12.5V (+/-0.2V)	ON	ON	OFF	ON	OFF	OFF

# **ABNORMAL OPERATION MODE**

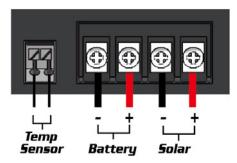

Solar panel abnormal mode	LCD display	LED indication	LCD backlight
Solar panel weak		ပ <u>်</u> Flash	ON
Solar panel reverse connection	888	ပ Flash	Flash
Solar panel over voltage (> 26.5V)	888	ပ Flash	Flash

Battery abnormal mode	LCD display	LED indication			LCD backlight	
Battery disconnected or less than 3.0V	888	Flash Flash Flash		Flash		
Battery reverse connection	8.8.8	Flash			Flash	
Battery over voltage than > 17.5V	8.8.8			Flash		
Battery temperature over 65C	888	Flash Flash Flash		Flash		

The solar controller abnormal mode	LCD display	LED indication	LCD backlight
The controller over temperature protection	888		Flash

# **OPTIONAL EXTERNAL DEVICE**

The controller provides a port for the optional temperature sensor (Temperature sensor not included)

## **Optional external Battery temperature sensor:**

As an option, the unit provides a port to connect the external battery temperature sensor; If the external battery temperature sensor is connected, the unit will optimize the charging performance subjected to the battery temperature detected and provide the battery over temperature protection, in some case, if battery over temperature occurs, the controller will automatically stop charging.
